

# Mail for Exchange

(Microsoft® Exchange ActiveSync®)

## Always-on email experience

- Mail for Exchange is the mobile email solution available for all Nokia S60 3rd Edition devices, including Nokia Eseries & Nokia Nseries.
- It utilizes Exchange ActiveSync, a protocol developed by Microsoft that enables wireless synchronization of email, calendar, contact data, and also provides access to the global company directory.
- Using Nokia devices, this email experience is supported either over a mobile network or wireless LAN.
- To ensure data security, Exchange ActiveSync uses an encrypted HTTPS connection that is established and maintained between the device and the server while information is being transferred.
- Synchronization is fast due to enhanced data compression, leading to a quicker experience when sending and receiving message.

## Technical specifications
