S60 Open to new features

Software platform needs to meet the requirements of the operators

Simplify Handset Deployment

Reduce Operational Costs

Shorten Time to Market

Strengthen Brand in User Interface

UI Flexibility

UI experience

Decouple Service Innovation From Handset Development

OTA Application Install

Provide Largest addressable market

Developer Ecosystem

Critical Mass

S60 software on Symbian OS chosen as a preferred software platform by Orange

- Nokia Corporation and Orange have today announced of software platform collaboration
- The focus of the collaboration is to create an Orange specific software package to complement S60 software on Symbian OS

Today's announcement demonstrates S60 software's extensibility to respond to various market requirements.

S60 fosters mobile innovation through open source

- S60 is working with open source communities on several different projects:
 - Browser for S60
 - Internet Radio for S60
 - Symbian Perl and Python for S60 programming environments
 - Mobile Web server ported from existing open source

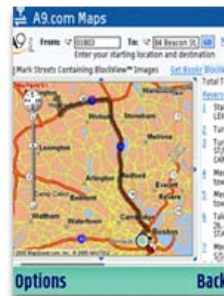

For more information of these and other Nokia open source projects please go to:

S60 Open to new features

Web Browser for S60 – Experience true Web

- Based on open source components used by desktop browsers
- Brings desktop-like browsing experience to the mobile device
- Innovation redefines mobile browsing user experience
- Fulfills consumers' browsing needs

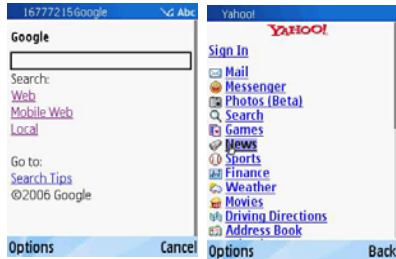

Browser contributes the largest share and largest amount of average traffic of packet data services use (Nokia Smartphone360 study, July 2006)

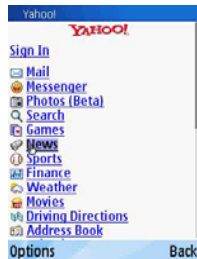

Web Browser for S60 – New features

Best of all worlds in one default browser

Floating Toolbar – quick & easy way to access most-used features

WML

XHTML

HTML

Auto complete & password manager

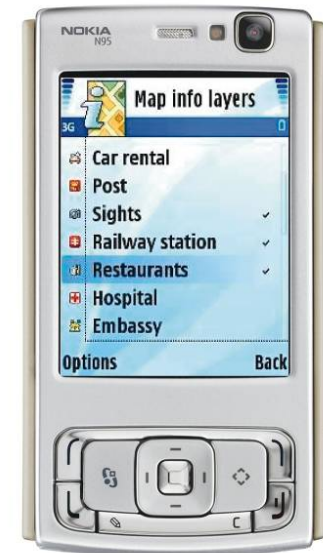

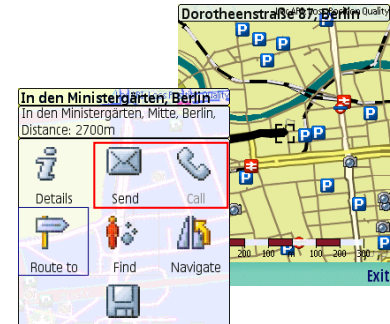

Portrait – Landscape mode

Web Feeds with Atom & auto update support

Location solutions for S60 – The next big wave

- Smartphones viable platforms for location solutions
- S60 provides powerful location middleware services for applications
 - Location acquisition framework
 - Flexible access to location information
 - Enables simultaneous location applications
 - Landmarks support
 - Unique benefit of the S60 software
 - Landmark sharing
 - Enables operators, service providers and companies to provide landmark sets for consumers

S60 software makes the smartphone smart

- Smartphone markets face strong growth
 - S60 leading the market with over 50% market share
- S60 software on Symbian OS chosen as a preferred software platform by the leading operators like Vodafone and Orange
- S60 3rd Edition devices and applications are moving fast to volumes
