Nokia N8. Has a touch screen and amazing spec including a 12 megapixel camera.

Nokia C7. Super sleek and slim design with full-touch 3.5" glass display.

Nokia C6. Compact touch screen with integrated social networks.

## Success has got mail.

Mail for Exchange on  
Nokia smartphones.

## Success stays on top of business.

### Mail for exchange

The place to check your work emails is now anywhere thanks to Mail for Exchange on your mobile. Nokia E7 is the latest in the Nokia business smartphone range to offer you this essential service. It's simple to set up and easy to use.

### How it works.

Mail for Exchange connects to your existing Microsoft® Exchange server using Microsoft® Exchange ActiveSync® protocol. Its push capabilities send emails straight to your smartphone, as they are from a server to your desktop PC. Your calendar and tasks are synchronised in real-time and all your company contacts can be accessed from the server.

### Your business and Nokia.

Using Mail for Exchange is a cost effective way of mobilising your business as it requires no additional hardware or software licenses.

Nokia has over 50 compatible models offering PC-like email experience, VoIP communications and access to corporate instant messaging. Mail for exchange on Nokia smartphones is a reliable and secure mobile solution that can boost your business venture's productivity and efficiency.

### Ovi Store offers powerful business applications.

Did you know Nokia also provides QuickOffice®, Adobe PDF viewer, Salesforce.com, Bloomberg, Reuters, plus many more apps? Enabling them helps you to be more organised. To find out more, visit the Ovi Store at [store.ovi.com](http://store.ovi.com).

## Success can't wait to get going.

On Nokia E7 and the latest Nokia models, Mail for Exchange is integrated with the smartphone's email application.

So, setting up is this simple:

- Go to the email set-up screen and choose 'set up email'
- Select 'Mail for Exchange' from the picklist
- Fill in your email address, username and password
- Fill in your domain name and email server name
- Choose your Internet access point

Push email is active and your work emails are now automatically sent and received. Remember, you can also select other items such as calendar and folders to synchronise.

If you have a Nokia smartphone model which does not have Mail for Exchange integrated or preloaded, please see [www.nokia.com/mailforexchange](http://www.nokia.com/mailforexchange) for support.
