Connecting People

Leaflet

As businesses become increasingly mobile, Mail for Exchange enables workforces to stay in touch with the office, even when they're on the move. It offers all the benefits of desktop email, without the constraints of being stuck behind a desk. And a mobilised business means greater productivity and profitability.

What is Mail for Exchange?

Mail for Exchange synchronises and manages emails in real-time, thanks to its 'push' capability (enabling email to travel straight from server to handset, as it does from server to desktop pc). The user can then adapt it to suit their personal settings, such as email signatures. It offers PIM information, including calendar, contacts and tasks, and allows the user to accept/decline calendar invitations and originate meeting requests. It can be used to visualise and edit* attachments and to access data quickly and securely.

How can your business benefit?

Nokia's Mail for Exchange requires no extra hardware or software licences, as it's already set up to work with existing Microsoft® Exchange Servers. This means you can mobilise your entire workforce without the need for any additional infrastructure or IT training.

Mail for Exchange can be implemented with no fuss, no hidden costs, and no time wasted on its set-up. It simply offers clever mobile solutions for businesses on the move.

Which Nokia devices are compatible?

Any Nokia Eseries, including the sleek, functional Nokia E72 featured here, any Nokia Nseries or other Nokia S60 3rd or 5th edition handset. The full list, as well as device specific set-up guides and other support material, is available at nokia.com/mailforexchange

Mail for Exchange for Nokia at a glance:

- Collaborate and connect with work from wherever you are
- Instant access to your emails, calendar, contacts and tasks
- Voice calls can still be made and received while Mail for Exchange is running
- No hidden costs. No additional software. No licensing fees
- Once the solution is in place, mobile devices can be out-of-the-box and operational in minutes
