**Quick Reference
Guide**

Nokia for Business

Mail for Exchange is designed for Nokia devices and delivers a comprehensive solution for businesses. It allows you to easily and securely mobilise Microsoft Exchange email, calendar, contacts and tasks on a wide range of Nokia devices.

Mail for Exchange

For businesses that use Microsoft backend technologies, Mail for Exchange provides a flexible and simple mobile email solution. Mail for Exchange uses the Microsoft ActiveSync protocol to directly connect to Microsoft Exchange servers. This allows you to wirelessly synchronise email, calendar, contacts and tasks between Microsoft Exchange accounts and Nokia devices. Crucially, no third-party middleware is required. That's because Mail for Exchange uses Direct Push technology and an encrypted HTTPS connection, which enables a seamless, secure and permanent email experience.

Key features*

Mail for Exchange uses Microsoft ActiveSync protocol available with the Microsoft® Exchange Server 2003, Microsoft® Exchange Server 2007 and Microsoft Windows Small Business Server. It connects directly to Microsoft Exchange Server without the need for any third-party middleware.

Email and Personal Information Management (PIM) features

Always-on email

- View inbox with an overview of email
- Create a new email
- Answer email as Reply-to and Reply-to-All
- Forward incoming email
- Mark email as 'read' or 'unread'
- Delete email
- Add attachments to outgoing email
- Open or save received email attachments to the device for later viewing or editing*
- Touch UI support**

Calendar synchronisation

- Synchronise calendar entries on the mobile device
- Choose from various calendar views (daily, weekly, monthly)
- Originate meeting request from the mobile device

Contacts

- Synchronise contact entries on the mobile device
- View, add, edit and delete existing contact entries

Select administration features

Preparation

- Configuration of an individual device
- Device configuration for multiple users via optional Device Management

Security

- Support for SSL encryption

Microsoft Exchange Server 2003 SP2 supports the following additional security features:

- Password-locked contents
- Lock and wipe functions:
 - The administrator can remotely lock and wipe a device they support if it's lost or stolen
 - The device is wiped if a password is entered incorrectly a predefined number of times
- Supports essential Microsoft Exchange 2007 SP1 security policies

Synchronisation

- Manual, scheduled (or periodic) and permanent synchronisation
- Manual and scheduled wireless synchronisation of mobile devices is delivered using Microsoft Exchange Server 2003 SP1. Permanent wireless synchronisation is supported by the Direct Push technology in Exchange Server 2003 SP2
- Synchronisation according to individually configurable parameters
- Synchronisation time filters

- Suggests error corrections when typing
- Learns new and frequently used words
- Easier access to special characters with long press
- Simple email set-up
- Quick access via Home screen or Messaging One Touch key

Nokia devices

The Nokia Eseries portfolio comprises a broad range of mobile devices, which offer a host of features at different price points. They're tailored for business and although highly sophisticated, extremely easy to use. The Nokia Eseries devices combine superior voice quality, personal information management and messaging functionality into sleek and attractive mobile devices.

Using Mail for Exchange support with Nokia Nseries (and other S60 devices) can deliver more options for people who want stylish, high-performance devices with enhanced multimedia capabilities. These intuitive devices provide superb entertainment features. Yet there's no compromise of information access or voice functionality that employees need when away from their desks. All Nokia devices with Mail for Exchange support are built on the S60 platform on the open Symbian operating system, which is the most widely used smartphone operating system in the world.

Nokia Eseries**

- Purpose-built mobile devices that are designed for different types of mobile workers, including models with and without full messaging keyboards
- Intuitive, standards-based S60 platform on Symbian OS user interface
- Wi-Fi/WLAN and HSDPA for high-speed data connectivity
- Instant Messaging, conference calls, VoIP calls, video conferencing, Presence and robust web browsing
- View and edit Microsoft Office documents and PDF files
- VPN client for secure access to corporate intranet
- Two home screens to separate work from personal information and applications
- MP3 player, RSS feeds, camera, video streaming and FM radio
- A-GPS for location-based services
- Expandable storage
- Support for internet services offered by Nokia: Nokia Maps and WidSets
- Support for antivirus and antispam software from Trend Micro, Symantec and F-Secure

The Nokia Eseries offers built-in features as well as add-on applications to meet the security needs of your organisation. These features include hardware-accelerated device and memory card encryption, integrated mobile VPN support and device lock and wipe. What's more, device management provides efficient tools to configure and maintain mobile devices.

* Specific functionality varies by Mail for Exchange version, Microsoft Exchange Server release and feature/service pack in use.
Some security features and idle screen plug-ins are only available on Nokia Eseries devices.

** Specific functionality varies by device.
