

Microsoft® Communicator Mobile

for Nokia devices

NOKIA
Connecting People

Data sheet

The first tangible result of the collaboration between Microsoft and Nokia has arrived. Enterprises can now streamline their business messaging with Microsoft® Communicator Mobile for Nokia Symbian devices starting with Nokia Eseries.

Microsoft® Communicator Mobile – a presence and instant messaging application for compatible Nokia devices. Able to connect directly to Microsoft® Office Communications Server located behind your enterprise firewall through the cellular data network. In the current business model it's increasingly important to know how colleagues can be reached. This allows your workforce a 360° view on contact status and availability. Using a traffic light system – available, busy, do not disturb, away – the workforce can be alerted of each other's status, allowing them to call, instant message or email respectively.

This mobile application delivers a similar presence and instant messaging user experience as it does on the PC-based Microsoft® Communicator.

Desktop-like user experience

This is an easy-to-use application instantly locating presence information for your Communicator contacts in the device's phone book and for contacts searched from company directory. It allows the user to:

- Check the availability of your colleagues
- Decide the best way to communicate with your colleagues based on their presence status
- Start instant messaging conversations directly from contact card
- Modify your own presence information
- Easy setup, just enter your domain/user name and password, same as your desktop, and server address

Presence

Traffic lights show the current status of each contact; this is automatically generated based on Microsoft Outlook® Calendar information and user activity. Users can modify their own presence status.

Instant messaging

Begin an instant message directly from the contact list. Conversations with one or many contacts can coexist in one session and multiple sessions can run simultaneously for greater flexibility.

Contact list

All contacts, available contacts and recent contacts are indicated to the user. This enables instant messaging, emails or cellular calls to be made directly from the contacts in your company directory – a listing that also shows presence status. The search function supports partial names and best effort matching for quick contacts searching.

The decision to mobilise company communications

The benefits of Microsoft® Communicator Mobile as a business solution are considerable, delivering a cost-effective and secure way for enterprise IT to mobilise company communications.

- Familiar experience for those who already use Microsoft Communicator on their PC
- With no additional licence costs
- No need for new IT hardware
- Simple end-user setup helps to minimise support needs
- Communications between mobile device and server are encrypted
- Requires same authentication credentials from the user as the desktop solution

Summary of key benefits and value

End-user:

- Check the availability of your colleagues
- Decide the best way to communicate with your colleagues
- Start instant messaging conversations directly from contact card
- Inform your availability by modifying your own presence information

Enterprise:

- Cost-effective way to mobilise company communications
- No additional licence costs
- Easy end-user setup helps to minimise IT support costs
- Secure solution meeting business IT requirements
