Data Sheet

Nokia for Business

Do you need to connect to the Internet, but have no fixed connection available? Problem solved. With the help of Nokia PC Internet Access software, you can get your compatible PC connected to the Internet using your Nokia device. Nokia PC Internet Access software is integrated into the Nokia device memory. To install and use the application, device must be connected to the PC with a cable.

Connect your PC to Internet using your Nokia device

Connecting PC to the Internet is easy when you use a compatible Nokia device. Simply connect your Nokia device to the PC with a USB cable. Nokia device automatically prompts you with "Connect PC to web". Nokia PC Internet Access software is launched and installed on your PC from the Nokia device memory. The software automatically fetches the connection settings (Internet Access Point) from your

device and configures them to your PC. After the installation is complete, PC is ready to connect to the Internet and you can start browsing the web.

Next time you want to connect to the Internet, just connect the device with USB cable to your PC again. Internet connection is easy to start by just clicking "Connect" from the Nokia PC Internet Access software on your PC. Nokia PC Internet Access software makes it easy to start browsing the web when ever you need to. To close the

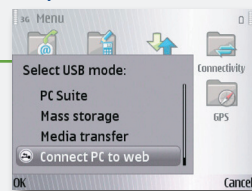

connection, click "disconnect" from the Nokia PC Internet Access application running on your PC.

If you are visiting a network other than your home network, for example when traveling abroad, the connection is created using the same connection settings as in your home network. Note that in those cases, the connection pricing may be higher than in your home network.

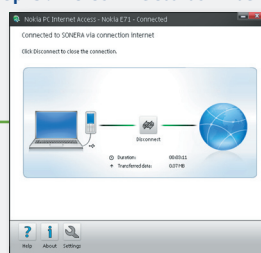

Step 1: Plug in

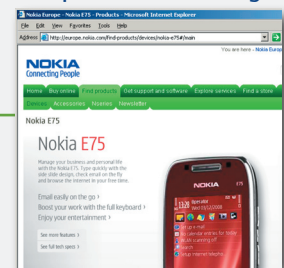

Step 2: Click to connect

Step 3: PC connects to Internet

Step 4: Start browsing
