The Nokia 7360 ISAM FX is a high-capacity fiber switch designed to meet the evolving needs of enterprise Optical LAN. It allows enterprises and other organizations to enjoy a premium experience with all their services now and to smoothly evolve to an even higher capacity tomorrow in a cost-effective way.

The Nokia 7360 ISAM FX simultaneously supports GPON and next-generation PON technologies. It enables delivery of all services, including voice, data, video, Wi-Fi, security, surveillance building automation and more through its market-leading capacity and non-blocking connectivity to each user port.

As part of the Nokia Optical LAN solution, the Nokia 5571 PCC provides a highly intuitive, simplified environment for configuration, automatic activation, fault reporting, troubleshooting, maintenance and much more.

The Optical LAN ONTs are designed to deliver gigabit and 10-gigabit speeds in an Optical LAN environment. They provide various GE, 10 GE and POTS user interfaces depending on the form factor and deliver premium service experience.
