

Nokia Environmental Policy

Our environmental policy was first published in 1994 based on the principles of ICC business charter of sustainable development (International Chamber of Commerce). Nokia takes an active, open and ethically sound approach to managing environmental issues.

Sound environmental management is central to our business, important to our customers and stakeholders, and key to securing our future. Nokia continuously seeks to prevent pollution and to reduce the environmental impacts of its products and services throughout their life cycle. Meeting this commitment is a primary management objective and the individual and collective responsibility of all employees.

Implementation:

The environmental policy is part of the general management process and environmental considerations are incorporated into relevant business planning, decision making, implementation and tracking activities.

Business functions ensure the needed competences, and plan and implement improvement programs with innovative and pragmatic solutions.

Nokia is committed to comply with all applicable environmental requirements and to adopt management systems that enhance our environmental performance.

Continuous improvement targets and programs are set for the significant environmental aspects based on the understanding, measurement and minimization of the environmental impacts of a product or service throughout its lifecycle.

We collaborate with our suppliers, customers and other stakeholders with the aim to minimize the potential negative environmental impacts of our business as well as maximize the potential of technology used for the good of the environment and society.

Communication covering our environmental commitment and performance is proactive and open with relevant stakeholders, and feedback is encouraged.
